2. The following is an examiner's statement of reasons for allowance:

Claim 1 and its dependent claims are allowed because prior art alone or in combination with fail to disclose, teach or suggest an electro-optical level that includes a bubble level having a liquid and a gas bubble therein, a light sensor disposed on a side of the bubble level opposite the light source and operative for identifying characteristics of light impinging thereon, a display for displaying output readings of light sensor indicative of levelness, and a controller connected to the light sensor and the display, the controller being operative to identified display output data indicative of at least one end of the bubble in combination with other limitations.

Claim 14 and its dependent claims are allowed because prior art alone or in combination with fail to disclose, teach or suggest a method for assessing levelness of an object providing a bubble level having a bubble tube with a liquid therein and a bubble formed by the liquid in the bubble tube, directing light through the bubble tube, sensing characteristics of the focused light at a plurality of locations along the bubble tube, identifying characteristics sensed for the focused light by measuring output voltages produced by the focused light at each of the plurality locations parallel to the bubble tube and identifying at least one location having a significantly lower output

voltage level than locations spaced therefrom for identifying at least one end of the bubble, and calculating a degree of levelness based on a location sensed for the end of the bubble in combination with the other limitations.
